## Hmwk soln assign 4

1.) You are given the voltage for two point charges, one above and one below the axis. You are told this is a soln to the charge above and a conducting plane located at z=0. As shown in class using Gauss's law

You need to find E near the conductor.

Since E will be perpendicular to the surface you need on find the component.

- 2.) See the other pdf file posted in this section of the wiki for this soln.
- 3.) See the other pdf file for this soln.

4.)(q) 
$$\Theta$$
 $V = \frac{1}{4\pi\epsilon_0} \sum_{n=1}^{2} \frac{1}{4\pi\epsilon_0} = \frac{1}{4\pi\epsilon_0} = \frac{1}{4\pi\epsilon_0} = \frac{1}{4\pi\epsilon_0} \frac{1}{4\pi\epsilon_0} = \frac{1}{4\pi\epsilon$ 

for rek 
$$V = \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

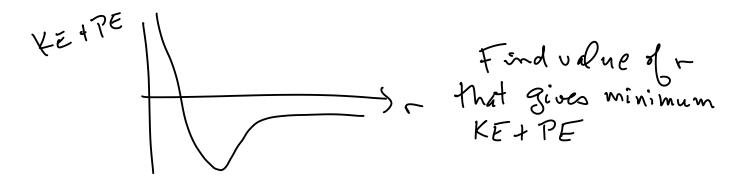

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} + \frac{1}{2} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} + \frac{1}{2} \left( \frac{r^2 R^2}{2} \right) \right]$$

$$= \frac{1}{4\pi\epsilon_0} \left[ \frac{1}{R^3} - \frac{1}{R^3} + \frac{1}{R^3} +$$

$$\frac{d}{dr}(KE+PE) = 0$$
Solve for r
